Extract String

This component will help you extract text from payloads or other strings.

It has 3 properties:

startString - this will receive the point from where you want to begin text extraction

fullString - this si the entire text you have such as a payload from an api etc..

EndString - this will recive the string where the extraction will end

So when this component will be used it will return a sub-string of fullString between startString and EndString

Example of Usage

```
hello:
    component: "SubstringExtraction"
    properties:
      startString: "User Name is"
      fullString: "The ID=0000012333 and User Name is john.dunbar"
      EndString: ""

  view_result:
    component: "System.Output"
    properties:
      text: '${user.extractedString}'
      keepTurn: true
    transitions:
      return: "done"
```
